Change the title block information (floor plan/elevation preview)

If you want to change the text that appears at the top or bottom of the page, you must edit the files warndim.tx0 and warndes.tx0 located in the …\config\60 folder where 20-20 is installed. Use Notepad to edit those files and make sure not to exceed the number of characters and lines already typed in, otherwise the text will not fit in the title block. To access Notepad from your Windows desktop, click the Start menu, then choose Accessories, Notepad.

You can also change the logo file, the drawing number and add or remove a sheet outline. See Set up the page for printing for more details on how to change the title block and the printed page information.
