DRAG AND DROP ATTACHMENTS
(It's less clicks)

As you are aware, there are multiple methods to perform most functions in 2020 Design. The next time you have to apply a repetitive attachment (say applying finished ends or doors on ends) to various cabinets in your design…TRY THIS!

Bring up the finished end attachment section of your catalog in your Drag and Drop Box and instead of using the Paper-Clip or the Attributes Method, Drag and Drop the appropriate finished ends to the necessary cabinets. Just click and hold your left mouse button down and drag the attachment over the target cabinet and a Paper-Clip will appear adjacent to your pointer when you place the pointer over a cabinet….just turn it loose. A line will appear under the cabinet code of the target cabinet signifying that an attachment has been applied to the cabinet.
You will save yourself a whole bunch of clicks.

Keep in mind that should a specific modification or attachment not be allowed for a specific cabinet group due to relations (2020's validation system), the system will pop a message up and notify you that the cabinet will not accept the Attachment or Modification.

Give it a try….it's faster.
